Professional Summary

Highly motivated and detail-oriented Information Science & Engineering student (graduated in 2026) with practical experience in software development through internships and academic projects. Skilled in Java, HTML, CSS, JavaScript, and MySQL, with hands-on experience in building web applications, backend systems, and database-driven solutions. Strong understanding of object-oriented programming (OOP), problem-solving, and software design principles. Passionate about leveraging technology to deliver efficient solutions and eager to contribute to innovative projects in an entry-level software engineering role.

Education

B.E. in Information Science & Engineering BLDEACET College of Engineering and Technology, Vijaypur 2022 – 2026
Cumulative GPA: 8.2/10.0

Technical Skills

Hard Skills: Java, Spring Boot, JDBC, C, C++, Python, HTML, CSS, JavaScript, MySQL / PostgreSQL

Soft Skills: Problem Solving, Debugging, Collaboration, Analytical Thinking

Tools & Platforms: VS Code, Docker, NetBeans, n8n, Git, Maven, Postman, Kafka, Redis

Domain Terms: RESTful Api, JWT Authentication, RBAC, Artificial Intelligence, Machine Learning, Object-Oriented Programming, Cyber security, Network security authentication, Web application security, Backend System.

Experience

Levant Private Limited -- Software Engineering & Systems Intern April 2026 – Present

Developed and maintained backend modules using Java, JDBC, and MySQL for FinTech applications.

Built and integrated REST APIs, webhooks, and third-party API connectors for payment and banking workflows.

Assisted in database design, SQL query optimization, and backend business logic implementation.

Worked on debugging, issue resolution, and performance optimization of backend applications.

Followed secure coding practices and participated in vulnerability assessment and application security improvements.

Collaborated with the engineering team using Git and Agile development practices to deliver production-ready features.

Airowire Networks Pvt. Ltd. -- Cybersecurity, AI & Networking Intern Nov 2025 – April 2026

Engineered cybersecurity solutions, conducting vulnerability assessments and hardening web and network applications.

Discovered critical security flaws and instituted remediation measures that boosted system resilience.

Projects

Levant Payment Gateway April 2026

Developed backend modules for a payment gateway using Java Spring Boot.

Implemented secure REST APIs, merchant onboarding, payment initiation, and callback handling.

Integrated database operations, authentication, and payment processing workflows.

Worked with Docker, PostgreSQL, and API testing using Postman.

User Management Dashboard (RBAC) | Spring Boot, React.js, MySQL, JWT April 2026

Developed a secure Role-Based Access Control (RBAC) system with JWT authentication and authorization.

Implemented user, role, and permission management with CRUD operations using Spring Boot and MySQL.

Built a responsive React.js frontend with protected routes and permission-based access control.

Designed RESTful APIs and integrated Spring Security for secure backend access management.

AI Workflow Automation (n8n, AI Tools) Mar 2026

Built a shipping label generation workflow using n8n by connecting Google Sheets, OpenAI API, and a PDF API.

Leveraged AI to automatically format address data, generating accurate shipping labels.

Wrote JavaScript code in n8n to create HTML for multiple labels and convert it into a PDF.

Automated the full process from reading data → generating labels → creating PDF → sending via email, which reduced manual work.

ATM Simulator System (Java, JDBC, MySQL) Aug 2023 – Dec 2023

Developed a desktop-based ATM simulation supporting secure authentication, transactions, and account management. Integrated Java with MySQL using JDBC to ensure consistent data handling and reliable backend operations.
